Qualitative:

The Liquidity Coverage Ratio (LCR) is a global minimum standard for Banks' Liquidity Risk Management. It aims to ensure that a bank has an adequate stock of unencumbered High-Quality Liquid Assets (HQLA) that can be converted into cash easily and immediately to meet its liquidity needs for the next 30 calendar day liquidity stress scenario.

The LCR is a ratio of Bank's High Quality Liquid Assets (HQLA) to the estimated net outflows over next 30 calendar day period of significant stress. The Bank's HQLA mainly consists of Level 1 Assets comprising of excess of SLR balances, the extent allowed under the Marginal Standing Facility (MSF) and Facility to Avail Liquidity for Liquidity Coverage Ratio (FALLCR). Additionally, cash, balances in excess of cash reserve requirement with RBI also form part of Level 1 HQLA. Level 2 HQLA primarily consists of corporate bonds, debentures, commercial papers issued by non-financial institutions which are rated AA- and above as Level 2A and rated BBB- to A+, as level 2B, respectively, considered at prescribed haircuts.

Cash outflows are calculated by applying RBI prescribed outflow factors to the various categories or types of liabilities by the outflow run-off rates and cash inflows are calculated by multiplying the outstanding balances of various categories of contractual receivables by the rates at which they are expected to flow in.
